Summary

AI undergraduate with hands-on experience in LLM evaluation, RLHF pipelines, and agent-based system design. Built domain-specific frameworks involving policy definition, tool development, and database schema design for structured LLM task execution, as well as fully local tool-augmented agents using open-weight models. Interested in scalable LLM systems, model reliability, and applied AI engineering.

Education

Information Technology University

BS Artificial Intelligence

Sep 2023 – May 2027

Lahore

Kinnaird College

Intermediate (ICS) – 89%

2021 – 2023

Lahore

Experience

Turing (via Swift Solutions)

LLM Trainer (QA)

Oct 2024 – Present

Remote

- **AI Trainer** Evaluated LLM code generation for logical consistency, security compliance, and task accuracy; contributed to RLHF pipelines for improving model performance.
- **Prompt Engineer (Anthropic)** Executed and analyzed prompt-response cycles using GitHub-based tooling; identified failure modes and documented outputs for model refinement.
- **LLM Systems Developer (DB Domain Implementation)** Designed and implemented domain-specific interaction frameworks for LLM agents, including:
 - * Defined structured **policies** for platform-level operations (e.g., GitHub workflows such as repository creation, forking, and cloning).
 - * Developed corresponding **tools/APIs** (e.g., `fetch_repo`, `create_repo`) aligned with policy constraints, similar to tool-augmented agent systems like TauBench.
 - * Designed and maintained a collaborative **database schema** to support policy variables, task generation, and team-wide consistency.
- **Data Annotator (Meta)** Annotated structured video datasets and generated metadata used in downstream LLM training pipelines.
- **Agent Evaluator (Meta – CUA)** Evaluated computer-use agents by testing real-world task execution, edge cases, and output correctness.

GDG ITU – CodeRush 2026

ML Competition – 3rd Place

2026

Lahore

- Built an economic class classifier (Lower/Middle/Upper) on bag-structured demographic data using a LightGBM + Random Forest ensemble with threshold tuning; achieved **Macro F1: 0.7325** and **Middle F1: 0.7050**.
- Engineered 198 bag-level features from 29 raw columns; improved middle-class recall by +46% over logistic regression baseline.

Information Technology University

Teaching Assistant – DBMS

Feb 2025 – Jun 2025

Lahore

- Conducted lab sessions covering SQL, relational algebra, normalization, and transaction management for undergraduate students.
- Graded assignments and provided one-on-one academic support; helped improve overall cohort performance.

Projects

Local Autonomous Tool-Use Agent | Python, Ollama, Llama 3.2

2026

- Built and deployed a fully local, air-gapped LLM agent by serving Llama 3.2 (3B) through Ollama, removing dependency on external paid APIs for agentic workflows.
- Designed a JSON function-calling schema and implemented a custom Python tool (`read_business_process`) to give the model controlled, on-demand access to local files.
- Engineered a multi-turn agent loop in which the model autonomously decided to invoke the tool, ingested the returned data, and produced a structured 4-step automation plan to remove a manual data-entry bottleneck.

Integrated Transport Management System | C++, HTML/CSS/JS

2025

- Developed a full-stack transport booking platform with a C++ CGI backend handling dynamic input validation and fare calculation logic.
- Designed the request/response flow between frontend and backend to support real-time fare computation based on route and demand inputs.
- Built a responsive frontend using AJAX for seamless booking confirmations without full page reloads.

Emoji Detector | Python, ML

2025

- Built an image classification pipeline to recognize and categorize emojis, handling preprocessing and feature extraction to manage variation in image style and resolution.
- Iterated on model architecture and hyperparameters across multiple emoji classes to improve classification accuracy and reduce misclassification on visually similar inputs.

Recipe Book | React, JavaScript, CSS

2025

- Built a component-based recipe browsing web app in React, structuring reusable UI components to display and organize recipe content.
- Designed a clean, responsive layout using custom CSS to support an intuitive browsing experience across devices.

Collaborative Text Editor C++	2024
– Developed a Google Docs-style collaborative editor in C++ supporting simultaneous multi-user access with role-based permissions (view/edit). – Designed the underlying data structures to manage shared document state and prevent conflicting edits across concurrent users.	

Technical Skills

Python, C/C++, SQL, JavaScript, HTML/CSS
Machine Learning, NLP, LLMs, RLHF, Model Evaluation, Agentic Systems, Function Calling
PyTorch, HuggingFace, Ollama, REST APIs, Postman (API Testing), MySQL, Git
